

Release W22 WP

(Provisional)

Description

RELEASE W22 WP is a non-silicone release agent. Its particular formula enables the coated paper to be written and ink-jet printed.

Application

RELEASE W22 WP is suggested for paper applications, where the finished product has to be written or ink-jet printed and also show good release properties.

Technical Specifications

Method of analysis	MU	Standard
1. Total Solids	%	22.5±1
3. Brookfield Viscosity 25°C	mPa.s	500 - 1,000 ^①
8. pH	pH	6 - 8
- Solvents		water

① N. 2 RV; 20 RPM

Handling

The product can be diluted with water to the TS suitable for coating. The coating weight depends on the substrate, on the pressure sensitive adhesive and on the desired release power.

Packing

RELEASE W22 WP is supplied in 200 l plastic drums or 1000 l tanks.

Storing

Keep material at temperatures between +5°C and +40°C, avoid direct sunlight
